SRS DOCUMENT FOR EVENT PLANNING MANAGEMENT SYSTEM

1. INTRODUCTION

1.1 Purpose:

The purpose of this document is to describe the requirements for the Event Planning Management System (EPMS). This system will automate the process of planning, booking, and managing events like weddings, conferences, birthdays, and corporate events. This SRS is intended for developers, testers, project managers and clients.

1.2 Scope:

The system allows clients to request events online, managers to handle venue, budget, vendors, invitations and feedback. It includes modules for Client Management, Venue Management, Vendor Management, Budget Management, Invitation Management and Reporting.

1.3 Definitions:

EPMS - Event Planning Management System

Client - Person who requests an event

Manager - Person who manages the event

Vendor - Catering, Decoration, Sound service provider

2. OVERALL DESCRIPTION

2.1 Product Perspective:

This is a web-based application replacing the manual event planning process. It will be independent and have a database to store all event information.

2.2 User Classes:

a) Admin - Full access, manage users, venues, vendors

b) Event Manager - Approve requests, manage bookings, budget

c) Client - Register, request event, view status, give feedback

d) Vendor - View assigned work, update status

2.3 Operating Environment:

Frontend: HTML, CSS, JavaScript, React/ Angular

Backend: Java/Python, MySQL/MongoDB

Browser: Chrome, Firefox, Edge

3. FUNCTIONAL REQUIREMENTS

FR1: User Registration and Login

- System shall allow users to register with email, password.
- System shall authenticate login for all user types.

FR2: Event Request Management

- Client shall be able to create new event request (Type, Date, Guest Count, Budget).
- System shall generate a unique Event ID.
- Manager shall be able to view all requests.

FR3: Venue Management

- System shall show list of available venues.
- System shall check venue availability on selected date.
- Manager shall be able to book venue and confirm.

FR4: Budget Management

- System shall allow manager to prepare budget estimation.
- Client shall approve/reject budget.
- System shall generate final bill.

FR5: Vendor Allocation

- System shall assign vendors (Catering, Decoration, Photography).
- System shall send notification to vendors.

FR6: Invitation Management

- System shall allow sending e-invitations to guest list uploaded by client.

FR7: Feedback and Reporting

- After event completion, client can submit feedback.
- Admin can generate reports on events, revenue, vendor performance.

4. NON-FUNCTIONAL REQUIREMENTS

4.1 Performance: System should support 100 concurrent users and respond within 2 seconds.

4.2 Security: Passwords shall be encrypted. Only authorized users can access data. Payment details should be secure.

4.3 Usability: User-friendly interface, easy navigation.

4.4 Availability: System shall be available 24x7 with 99% uptime.

4.5 Scalability: System should be able to add more venues and vendors in future.

4.5 Scalability: System should be able to add more venues and vendors in future.

5. EXTERNAL INTERFACE REQUIREMENTS

5.1 User Interface: Simple dashboard for each user role.

5.2 Hardware Interface: PC, Laptop, Mobile with internet.

5.3 Software Interface: The system will interface with Payment Gateway (Razorpay/PayPal) and Email API for invitations.

6. OTHER REQUIREMENTS

6.1 Database Requirements: All event, client, vendor data must be stored securely with regular backup.

6.2 Legal: System must follow data privacy laws.
